Introduction

GeoCommunity Database (iGeoCom) is a set of geo-coded community information embedded with spatial reference in an open standard format. It contains a collection of location points of interest (POIs) in the community, such as school, clinic, library, sports ground, convenience store, railway station access, etc., with comprehensive location information, contact details and other related service information. This database can be used with other SMO's digital map bases for developing community-oriented GIS applications.

More than 30,000 records of community information have been collected and geo-coded. They are grouped under the following eight categories.

- Community Facilities, e.g. Community Centre, Mall, Convenience Store, etc.
- Education, e.g. Child Care Centre, Schools, University, etc.
- Medical, e.g. Hospital, Clinic, Home for the Elderly, Rehabilitation Centre, etc.
- Public Services / Facilities, e.g. Library, Post Office, Fire Station, Posting Box, etc.
- Recreation, e.g. Indoor Games Hall, Swimming Pool, etc.
- Religion, e.g. Church, Temple, etc.
- Transportation, e.g. Car Park, Petrol Station, Pier, Railway Access, Bus Terminus, etc.
- Tourism, e.g. Hotel, Guesthouse, etc.

Coordinate System

Point coordinates of the POIs are in World Geodetic System 1984 (WGS84) and attribute information of Easting and Northing are in Hong Kong 1980 Grid (HK 1980 Grid).

Data Source

The spatial location and attribute information of the POI data are mainly derived from topographic maps, and widely sourced from different government departments and related organisations.

Address

The Address field stores the location information of the POIs in the database. Approximate location is provided for POIs without an exact address.

Update Frequency

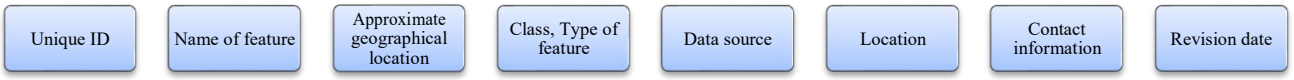

The data in iGeoCom is disseminated quarterly.
