Abstract:
The 3D Pedestrian Network, a vector type dataset, is derived from various source of data and data collected by field checking. It is graphical with attribute data that can be accessed, queried and displayed. It covers the built-up areas of the whole territory, outlying island include Lantau Island, Peng Chau, Cheung Chau, Lamma Island and Ma Wan. It also covers the major footways inside villages, major footpaths inside country parks and the opening hours of the footway inside buildings.
